mpg, .avi, .mkv and other formats. My doubt is that there are other software that support other formats, .mp3, .flac , etc.I have a Zotac and it has a HDMI port (I don't know if HDMI port is the same in all digital projectors). I wonder if I can connect my PC and play files in.mp3, .flac , .mp4, etc.Thanks. Yes it is very simple. You install a KMPlayer plug-in, configure it, then tell the KMPlayer player where to play the content and then tell the KMPlayer where to save it. The easiest way to do this is to use a dedicated software like VLC Media Player or KMPlayer.The VLC or KMPlayer can be used both as a stand-alone player and also as a plugin for your other media player like the KMPlayer. 1.5.1.2013 1.5.1.2012 1.5.1.2011 1.5.1.2010 General KMPlayer is a free software player to watch TV, videos, movies and listen to MP3 files. KMPlayer features \* Play DVDs with menus, subtitles and chapters \* Audio and subtitles files are played with or without subtitles \* Supports TV files with AVI extensions \* Supports avi files without an extension \* Supports avi files with an extension \* Supports AVI files with extensions like mpeg, mpg, wmv, etc \* Supports wmv files with extensions like mpeg, mpg, avi, etc \* Supports divx files with extensions like mpeg, mpg, avi, etc \* Supports AVI files with extensions like mpeg, mpg, avi, etc \* Supports avi files with extensions like 82157476af
